“Reduce, Reuse, Recycle: The best way for people to care for the Earth”

Title: The Three “R’s”

Have you ever been walking on the street and then start to smell a wave of tremendous smelling air? Well, a lot of people every day wear masks and cover their noses because of all the rubbish bins on the sidewalk filled to the brim with trash. All of the trash emits waves of stench across the streets, not to mention all of the cars on the streets creating enormous amounts of pollution in the air.

If you dislike the smell of rubbish everywhere, you can help stop it. For example if you have the different coloured recycle bins near to your home then you can sort out your rubbish and put the different kinds of recyclable rubbish into the bins. Just doing this can help the environment a mass amount.

There are three “Rs” that you can use to save our planet. If everyone does these three “Rs”. It will be very effective for our planet.

The first “R” is Reduce, for example if you want to be more environmentally friendly you can reduce using plastic bags and start using your own bags that you can buy and have from home. That can decrease the amount of plastic bag usage massively. Since the earth cannot “digest” plastic, the only solution is people reduce the amount of plastic going into the planet.

The second “R” is Reuse. Reusing is a very simple but effective way of saving the planet. All you really need to do is get an object or clothing that you no longer use and reinvent it into something useful.

The third and final “R” is Recycle. The amount of rubbish that Hong Kongers throw away is absolutely shocking. Not a lot of people recycle but the ones who do aren't enough save our planet. Although the government do provide a lot of recycling bins and advertise recycling but it isn't working. People need to sort their rubbish in order to keep the planet clean of rubbish.

If everyone does their part, the planet is sure to improve. All you need to do is follow the steps and the three “Rs”, and even if you just do a little amount of reusing, reducing or recycling, it can still make a big difference.
